Education

Dayananda Sagar Academy of Technology and Management

Dec 2022 - June 2026

B.E. in Artificial Intelligence and Machine Learning

Bengaluru, India

- CGPA: 8.01/10

- Coursework: Data Structures, Algorithms, Database Management Systems, Software Engineering, Operating Systems, Computer Networks, OOPs in Java, Machine Learning, Generative AI, Natural Language Processing

Technical Skills

Programming Languages: C, Java, Python, HTML, CSS, JavaScript

Libraries/Frameworks & Tools: VS Code, Git, GitHub, IntelliJ, NumPy, Pandas, PyTorch, Scikit-learn

Databases: SQL, MongoDB

DevOps/Cloud: GCP, AWS, Docker, CI/CD Pipelines, Cloud Fundamentals

Internship

CBA Services Private Limited

Jan 2026 - Jul 2026

Software Development Trainee

- Developed "RevPlay," a music streaming platform with a RESTful API backend and a React-based UI for browsing and playback
- Built "AssetFlow Management," a financial intelligence platform using FastAPI, React/Vite, and MongoDB, integrated with an Ollama-powered AI advisor for insights.
- Implemented CRUD operations and MongoDB data workflows, and set up cloud deployment pipelines on GCP/AWS.

Projects

Signature Recognition System |

github.com/Dineshkrishan/Image-processing

- Built a dual-platform signature forgery detection system (Flask web app + native Android app via Chaquopy) using a 6-metric similarity engine (MSE, SSIM, template matching, histogram correlation, HOG, NMI) across a 16x16 grid, avoiding GPU-dependent deep learning.
- Designed an adaptive baseline engine that flags a signature as forged if it underperforms the genuine-sample baseline on 3+ of the 6 metrics.
- **Tools:** Python, OpenCV, scikit-image, scikit-learn, Flask, Kotlin, Jetpack Compose, Chaquopy.

RAG PDF Chatbot |

github.com/Dineshkrishan/RAG

- Built a RAG-based PDF chatbot (LangChain + FAISS) supporting uploads up to 200MB, with automatic chunking, embedding, and semantic search.
- Integrated HuggingFace's all-MiniLM-L6-v2 embeddings with Mistral 7B via OpenRouter API to generate context-aware answers, served through a Streamlit UI.
- **Tools:** Python, LangChain, FAISS, HuggingFace, Streamlit, OpenRouter API.

Orchestrated Multi-Agent Investment System |

github.com/Dineshkrishan/Orchestrated-Multi-Agent-Investment-System

- Engineered a 3-agent orchestration system in Python that autonomously monitors, strategizes, and generates investment predictions using real-time financial APIs.
- Integrated live financial data feeds into a scalable agent framework, enabling collaborative decision-making across market analysis and strategy planning modules.
- **Tools used:** Python, Multi-Agent Systems, Financial Data APIs, Pandas, NumPy, HTML, CSS.

Certifications

Google / Industry: Google: Introduction to AI and Machine Learning on Google Cloud

- Nvidia: Getting Started with Deep Learning Course for Foundational Deep Learning Skills
- AWS: Building Language Models on AWS
- Infosys: Basics of Python and Python Foundation
- Udemy: UI/UX Design Essentials
